Anton Korchynskyi

Toronto, ON | (905) 328-3656 | anton.korchynskyi28@gmail.com | LinkedIn | GitHub | Portfolio

Education and Certifications

- Associate's Degree in Computer Programming and Analysis from Georgian College Status – Graduated
- Microsoft Certified: Azure Fundamentals (AZ-900)

Work History

I&IT Technology Specialist at Ontario Public Service, Toronto, ON *May 2025 - Oct 2025*

- Developed responsive web interfaces using Next.js, React, TypeScript, HTML, and CSS, translating business requirements into responsive components for a public-facing enterprise platform hosted in Microsoft Azure.
- Built REST APIs using Java, Spring Boot, Maven, and GitHub Copilot AI to act as a secure connection between SQL Server databases, external API services and the UI layer.
- Took ownership of development tasks, collaborated with cross-functional teams throughout Agile SDLC, and incorporated feedback through Git and Azure DevOps code reviews to deliver features that met business requirements and team quality standards.
- Applied TDD through unit tests with Jest and JUnit, troubleshot application failures by reproducing defects and identifying root causes, and documented fixes to help prevent issues from reaching production and facilitate faster future investigations.

I&IT Technology Analyst/Developer Co-op at Ontario Public Service, Toronto, ON *Jan 2024 - Apr 2025*

- Developed microservices using Java, Python, Flask, JavaScript, React, and MySQL, implementing registration, form processing, and role-based access for a proof of concept application.
- Built CI/CD pipelines using GitHub Actions and Azure DevOps to automate Docker builds, tests, and Kubernetes deployments, reducing manual effort to help developers integrate changes faster while maintaining consistent code quality standards.
- Quickly learned Azure resource provisioning to configure App Service and Azure Database for MySQL, then developed SQL queries and database schemas to enable cloud-hosted applications to securely store and retrieve business data.

Projects

PlotlineAI

- Developed and deployed a CSV analytics application using Next.js, Spring Boot, and the OpenAI API to provide validated charts and AI insights so users could explore their datasets.
- Designed an event-driven usage analytics pipeline with EventBridge, SQS, Lambda, S3, and Redshift Serverless to archive activity asynchronously and measure feature usage and rendering latency without disrupting application requests.

- Learned and applied AWS CDK IaC tool to provision serverless infrastructure, built GitHub Actions CI/CD pipelines with OIDC, and used CloudWatch logs and a Playwright E2E testing suite to catch failures early and support secure, reliable releases.

SoundHouseFun

- Developed a full-stack music e-commerce application using C#, ASP.NET Core MVC, Entity Framework Core, and SQL Server, enabling users to browse, purchase, and download individual songs.
- Built MVC controllers, Razor views, and Entity Framework Core data access to manage songs, albums, shopping carts, orders, and purchase history through a structured server-side architecture.
- Integrated the Stripe API to convert shopping carts into orders and make song downloads available after successful payment, supporting a complete checkout workflow.
- Implemented Google authentication (OAuth 2.0) and role-based access control to support secure user sign-in and provide administrators with controlled content-management capabilities.

Technical Skills

- Front End: React, Next.js, TypeScript, JavaScript, HTML, CSS
- Backend: Java, Spring Boot, C#, NET, ASP.NET MVC, Python, Flask, Node.js, PHP
- APIs & Data: REST API, JSON, MySQL, PostgreSQL, SQL Server (MS SQL), SQL
- Testing & Quality: Jest, JUnit
- Cloud & DevOps: Amazon Web Services (AWS), Microsoft Azure, Azure DevOps, Docker, Kubernetes, AKS, Git, CI/CD, GitHub Actions, GitHub
- Architecture: Cloud-native systems, microservices
- Methods & Tools: Agile, Scrum, Kanban, Jira, Microsoft Copilot
